Making sense of a disaster	2
Key Financial Data	3
A Case Study	4

## Insurance and disaster recovery

From Ben Burnett, fire and general specialist, Financial Independence, Tauranga.

The devastating Christchurch earthquakes are having a real impact on people's lives in many ways. The nature and precision of the insurance cover that has been put in place is now going to alleviate or exacerbate this stress in so many of those ways.

As a fire & general Broker I review many insurance covers and must emphasise how important it is to have the right covers in place. The difference between being well insured and underinsured can often be only a small difference in premium.

Following are the common areas of underinsurance and how certain areas of the fire & general insurance industry are responding.

### EQC and domestic insurance covers

In the event of an earthquake, the Earthquake Commission (EQC) will cover the first \$100,000 + GST for your house and the first \$20,000 + GST for your home contents, with the insurers paying the difference over these amounts, up to the amount of cover the policies are agreed to. The EQC collects premiums for these covers through insurers for each dwelling insured. The EQC's definition of a dwelling is "a habitable dwelling including a kitchen and bathroom". This means that where a house has a granny flat or self contained unit two, sets of EQC levies must be paid (except in rare circumstances).

An insurer will only pay out on the event of an earthquake if the EQC accepts the claim for the first portion of the loss. Therefore, if a house has two dwellings and is only insured for one, neither the EQC nor the private insurer will pay out on the second dwelling.

Other common issues are not including garaging, swimming pools or other permanent buildings within the area insured for the house. Not including these items will likely result in an uninsured loss.

### The issue of quality

House and contents covers provided by insurers range dramatically in terms of quality. Cheaper covers are commonly more restrictive so the difference at claim time can be significant.

House insurance policies are generally insured for replacement however, a quality cover will also allow for landscaping costs, the addition of sustainable products such as insulation and solar heating in the event of a total loss, a stress payment and alternative accommodation costs whilst undertaking the repairs.

The cover for alternative accommodation costs can vary dramatically from 6 to 12 months cover. Who would have thought that some of these Cantabrian earthquake sufferers were going to be out of their houses for up to 3 years? If you have rental property, the loss of rent following damage to your property can have a significant financial effect.

Many cheaper policies depreciate all contents items over a certain age, including the carpets. For example, the replacement value of carpet can be significantly higher than the current value of carpet, which may be over 10 years old, leaving the owner with the shortfall.

### The importance of advice

Every individual has a different exposure to a potential loss and the way policies respond to protect those individuals can vary. For peace of mind, a good insurance broker will review the policies you have in place and make recommendations of how you could mitigate any shortfalls.

Paris, so much to see,  
So much to do

Do what  
you can with  
what you have  
where you are.

*Theodore Roosevelt*

If you are worried about your investments, take a deep breath, make a cup of tea or coffee, have a lie down, and then give us a call to talk it through.

## Have you planned your trip to France?

Kiwis love to travel and with the dollar being relatively strong against the Euro it is a good time to go to Europe. A friend was at a barbecue recently where holidays were the topic of discussion. One couple, in particular, were excited about their forthcoming three week trip to France. They had read Lonely Planet Guides, Michelin Guides, brushed up on high school French and consulted with friends and acquaintances who had also been. As this particular couple enthusiastically described their meticulous planning my friend couldn't help but remember how little interest they had in their financial matters. They had even once described their hallway drawer where everything, that vaguely fell into the money category, was fired into after it was read, KiwiSaver statements, bank statements and even car registration reminders.

For most of us the short-term gratification of holidays will always be more enticing than long term planning for the financial future.

If the France bound couple had shown the same disregard for their holiday, maybe just showing up at the airport hoping to catch a plane

somewhere, not knowing if visas were required, not knowing what the currency or language of France was and with no accommodation booked, it's easy to imagine the disasters that would have awaited them at the other end of their long haul flight.

Apart from putting our financial house in order for our own benefit, there are our loved ones to think about too. We all heard the tragic story of the policeman killed on duty who failed to update the will he had made in 1985 at the age of 23, leaving everything to his adoptive father. Since then his circumstances had changed dramatically. He amassed an estate worth \$2million and his parents had split up. He hadn't ever updated his will. The consequence of this situation is his elderly mother, who survives on a pension and the odd day paid relief teaching, has received nothing.

Our appeal to readers in this first part of the year is to simply, if you have not already done so, please start giving some thought to your long term financial future. Find all those lost papers and consult an expert.

Get organised.

## Making sense of a disaster's impact

It seems the disasters in our part of the world are not letting up—the Australian floods, the Christchurch earthquakes and now the massive earthquake and tsunami in northeast Japan. At this stage the full extent of the damage in Japan is unknown, but it is clear it has resulted in terrible human tragedy. Right now the focus must be on the rescue efforts and our thoughts are with the Japanese people and all those affected.

Media headlines are currently sensationalising crisis-style sharp sell-offs within the stock markets, high anxiety, and volatility in the world's share markets.

The economic impact of this and the ensuing events will slow Japan's economic progress in the short term due to a range of factors, such as damaged factories, power supply, transport, infrastructure and diverted resources to rescue, repair and recovery.

However, as history would show us with disasters, economies recover.

Our investment strategies continue to be grounded in risk management. This means being broadly diversified across all markets and asset classes - including Japan's - as the only proven means of mitigating risks. It is important to remember our risk-balanced portfolios also embrace defensive assets, such as cash and fixed

interest.

It is inevitably tempting to succumb to emotions and react to falling market prices. In fact, it is typically an adverse decision to alter your long-term strategy at the wrong time for short-term reactionary reasons, such as when disasters occur. Selling investments at such times would be even worse. Further, by then waiting until markets recover before re-investing almost always means missing out on substantial recovery growth. Adverse conditions are inevitable and unpredictable.

Volatility - or risk - is one reason assets such as shares and properties have greater long-term returns. The only proven way to capture those returns is to endure the short-term volatility.

In that way you will increase the probability that you'll achieve your long-term financial objectives, which is what is most important to you. This is why we deliberately design, and when appropriate, amend our clients risk profile by repeatedly testing their unique circumstances and situation with our personal financial modelling.

If you would like us to discuss our personal financial modelling philosophy with you in mind please call us.

In the meantime, our thoughts continue to be with Japan and all those affected by the recent disasters.

# What is Financial Planning - A Case Study

from Gail's desk (names have been changed to protect privacy and identity)

If you cannot  
do great  
things: do  
small things in  
a great way.

J F Clarke

Joe is self employed and Mary works full time outside of the business. Joe and Mary came to us a couple of years ago wanting to get their financial affairs on track for retirement. Both are in their early 40's and on good incomes with a young family.

An initial appointment, which is at our cost, was set up. My primary job is to see clients, complete financial analysis and make proposals not only on how they can achieve their retirement and investment goals but also on how to plan for any unforeseen circumstances, like death, disability and severe illness.

Areas where I could add value were immediately identified and the formal information gathering process began i.e. current lifestyle, incomes, spending habits, asset ownership structures, insurances, taxation and much more. The list is quite endless when appropriate recommendations are required to be made.

All information gathered was analysed and financial modeling carried out. A Statement of Advice setting out a strategy for Joe and Mary on how to achieve their goals was presented. After getting the "green light" from the clients, I accompanied them to a solicitor and a Family Trust was formed to ensure that what they had achieved so far was protected, and for future asset protection purposes also. Their Wills were also reviewed and Powers of Attorney were set up. Changes to,

and the ownership of, existing insurance policies were undertaken. Fire and general insurances were reviewed by our specialist in that area and additional covers put in place specific to Joe's occupation. A full review of Joe's ACC cover was carried out in conjunction with his accountant and an ACC consultant. A personal savings plan effected which involved properly defining their appetite for risk and risk management, long-term objectives, investment outcome modeling and appropriate market diversification to ensure that their personal and lifestyle goals and objectives were achievable.

Joe and Mary, being the busy people they are, now have total peace of mind that **all** of their financial affairs are in order. The financial journey to meet their goals and objectives of enjoying a comfortable retirement by Joe's age 60 with an annual income of \$60,000 has now begun.

However, as economic conditions, government legislation and a range of issues, including personal circumstances will change over the course of the journey, it is important that their plan is annually reviewed to ensure they remain on track. I intend to be there for them every step of the way.

What I enjoy most about my role is meeting new people from all walks of life and applying my knowledge of 37 years industry experience. I like making a positive contribution in order to improve their lives and futures.
